

Bearings

More than 80 years of experience in the development and manufacture of metal slide bearings and highly developed production processes for slide bearing composite materials make our principals a global leader in the field.

More than 80 years of experience in the development and manufacture of metal slide bearings and highly developed production processes for slide bearing composite materials make our principals a global leader in the field.

Bearings (Std. & Undersize) are really available for dispatch at MPI's warehouse in Sharjah, UAE for various engine models.

Used in diesel and gas engines, slide bearings are also integrated in turbines, generators, gears and many more machine types worldwide. A wide range of designs of special slide bearing and multilayer composite cast parts respond to the specific demands of each type of application.
